LIGHTWEIGHT & COOL

Specifically designed for the Australian climate, Ice-Cool takes comfort to a new level. Lightweight, breathable & ever so cool, the Ice-Cool fabric weave allows natural airflow to the skin, creating an ideal temperature for the wearer and ensures comfort in hot and humid climates.

BODY COOLING TECHNOLOGY

The cooling function of Ice-Cool technology responds to body heat. Cooling is activated by rising body temperature and deactivated once cooling is complete, ensuring maximum comfort and performance. Cooling is aided further by Ice-Cool moisture-wicking qualities. Excess heat is drawn away from the skin and to the surface of the shirt. This discreet and quick evaporation process minimises sweating and allows the body temperature to reduce whilst the polo is worn.
