SILVERTECH POLO
1058 / 1158

ANTI-BACTERIAL & ANTI-ODOUR FINISH

A blend of yarn-treated CoolDry & nano-scale silver technology, SilverTech takes the feeling of fresh to a new level by fighting odour from inside each thread of the fabric. This nano-scale yarn treatment does not wash out, keeping you fresher for longer.

Rather than applying a chemical treatment to finished fabric, nano-scale silver is applied to raw yarn before the cloth is woven, allowing the anti-odour characteristics to permeate deep inside each thread. While many anti-bacterial and anti-odour treatments diminish over time, SilverTech also retains its anti-odour characteristics for the life of the garment!

MAXIMUM BREATHABILITY & STRETCH

As SilverTech is yarn-treated and no chemical coating is applied to the fabric, SilverTech maintains its open weave, breathing like cotton and ensuring comfort & breathability in the warmest of weathers. SilverTech is extremely soft & light with a silky finish. While still drawing heat from the wearer, the fabric retains a 'clean' feeling, even after extended wear.
